

EDSS Project Bulletin

Redbank Plains SES Depot
Builder: ICD Group
Contract Period: 15 Weeks
Contract value: \$115,230.00

Electrical Data & Security Services

The team at Electrical Data & Security Services (EDSS) has recently completed our role in the construction and fit-out of the new SES Depot located off Willow Road in Redbank Plains. Previously located at Jones Road Goodna, the State Emergency Services had outgrown the old building proving its size, layout and quality were inadequate for their functionality and needs.

The new building, constructed at the south eastern end of the Redbank Plains Recreational Reserve, saw us working closely with Integrated Construction & Development Group, to complete this project within the 15 week contract period.

EDSS completed the installation of all lighting, power, fire detection and communications work on the building, both internally and externally. This included the erection and fit-off of the external car park lighting poles, the supply and installation of the main switchboard and master panel as well as a provision for a future generator.
